Gentlemen: RE: COAL CREEK DISTRIBUTION

You are reminded that, under date of April 12, 1949, you were required to jointly install in the head of your joint canal diverting from Coal Creek, an adequate control head gate that may be set and locked. Also a Parshall measuring flume downstream therefrom in the canal to measure the water jointly diverted from the stream.

It was also required that plans and specifications be submitted to this office for approval, in order that construction be accomplished before the 1950 irrigation season. You are, therefore, urged to submit the plans and specifications in order that the construction work may be completed before winter sets in.

Yours very truly,

Harold A. Linke
STATE ENGINEER
